

Changes Since Last Push - Product Summary

Generated: 2026-04-04 09:09:06 UTC

Scope

Branch: main
Upstream: origin/main
Ahead/Behind: ahead=0, behind=0
Last pushed commit on origin/main: 85aecc8 | 2026-03-11 14:34:48 +0200 | osama | Fix lesson routing and editor save conflict handling
Current local diff summary: 51 files changed, 5037 insertions(+), 1433 deletions(-)
Note: There are no unpushed commits right now. This summary is based on local uncommitted changes after the last push.

Features Added

- Introduced grouped lesson versioning using `lessonKey`, allowing draft, published, and archived states to coexist as a single lesson family.
- Added a Summary + Lesson authoring mode. Editors can split content into two sections, and learners now get section tabs and section-aware TOC rendering.
- Added a new Tag Block content type in the editor and renderer for titled tag/chip groups.
 - Upgraded lesson media rendering with reusable media components, loading skeletons, and interactive HTML image lightbox support.
- Improved publish-state visibility in lesson management views with indicators like unpublished changes and last published state.

Problems Fixed / Risks Reduced

- Added stronger save conflict handling with explicit version and lock conflict responses, reducing accidental overwrite risks during concurrent editing.
- Fixed unlock persistence behavior by scoping unlock state per wiki slug (while preserving backward compatibility with legacy host-only keys).
- Hardened client state restoration by safely parsing sessionStorage JSON and auto-cleaning invalid state payloads.
- Added dedicated app/global error boundaries (plus pages fallback) so runtime failures degrade into graceful recovery screens instead of blank/error-crash states.
- Improved DB compatibility and fallback behavior for installations that do not yet have the `lesson` schema.

Platform and Developer Improvements

- Added Prisma URL helpers to avoid using `prisma://` proxy URLs for direct clients and provide clearer error messages for configuration errors for missing direct connections.
- Added/updated migration for lesson version grouping (`lessonKey` and related indexes) to support new patterns.
- Updated dev startup flow with a custom dev server script (port availability check, optional hot-reload, etc).
- Extended seed/test utilities to cover the new lesson model and richer block coverage (including media-heavy examples).

Evidence Appendix

The following changed areas were used to infer this non-code summary:

- app/api/lessons/route.ts
 - app/api/lessons/lock/route.ts
 - app/[locale]/[kit]/lesson/[lesson]/page.tsx
 - components/editor/Editor.tsx
 - components/editor/extensions/TagBlock.ts
 - components/editor/extensions/TagBlockComponent.tsx
 - components/lesson/InteractiveHtml.tsx
 - components/lesson/LessonMedia.tsx
 - components/editor/LessonsReorderList.tsx
 - lib/lesson-versions.ts
 - lib/lesson-sections.ts

- lib/unlock.ts
 - lib/session-storage.ts
 - lib/prisma-url.ts
 - prisma/migrations/20260330110000_lesson_version_groups/migration.sql
 - app/error.tsx
 - app/global-error.tsx
 - pages/_error.tsx
 - scripts/dev-server.js
 - scripts/ensure-getting-started.ts

Inspection basis: 51 tracked modified files in working tree at generation time.
